DETAILED ACTION

Response to Arguments

1. The applicant has argued that Nakagome (JP 09214092A) is silent with respect to a circuit board comprising an impedance component placed in a via and coupled to first plane and second plane further comprises rolled carbon material having a first end and a second end. The examiner finds this argument persuasive. Therefore, the examiner made decision to allow this limitation over the prior art of record.

Allowable Subject Matter

2. Claims 1, 2 ,6 ,8 and 14 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1 and 14, the prior art alone or in combination does not teach the limitation of a circuit board comprising an impedance component placed in a via and coupled to first plane and second plane further comprises rolled carbon material having a first end and a second end.

With respect to claim 8, the prior art alone or in combination does not teach the limitation of a method of adding impedance to a circuit board having a first and second planes, placed the impedance component in a via, wherein the impedance component further comprises rolled carbon material having first end and a second end.

Claims 2 and 6 depend on claim 1, they are allowed for the same reason.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation Relevant of Prior Art

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

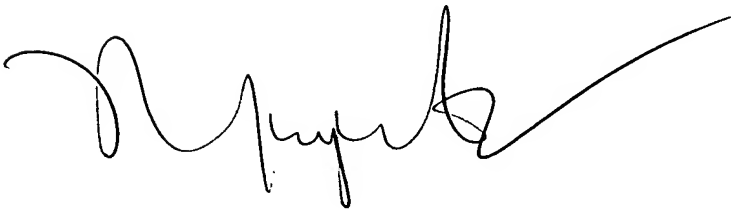

- a. Blackburn et al. (US 6,761,816) disclose printed circuit board with monolayers and capture ligands.
- b. Kwark (US 6,602,078) discloses electrical interconnect having a multi-layer circuit board structure and including a conductive spacer for impedance matching.
- c. Ishiwa et al. (US 6,653,572) disclose multilayer circuit board.
- d. Hiratsuka et al. (US 6,473,312) disclose printed circuit board, printed circuit board module and electronic device having adapting same.
